3D View of Buildings

2-DIN NAVICEIVER

The **Z-N626** is Zenec's brand new universal naviceiver. The new innovative and intuitive user interface is modern and easy to use. Never get lost with the full **iGO primo NextGen Navigation** package for Australia & New Zealand. Experience the best entertainment features with the high-tech multimedia system. The powerful **Parrot Bluetooth** module gives you stress-free call and phone management as well as music streaming. The **DAB+ tuner** system means you get clear radio reception and program variety. The built-in **CD/DVD drive** and **USB port** gives you a variety of playback options with the latest audio and video formats.

OPTIONAL HEMA 4WD NAV UPGRADE

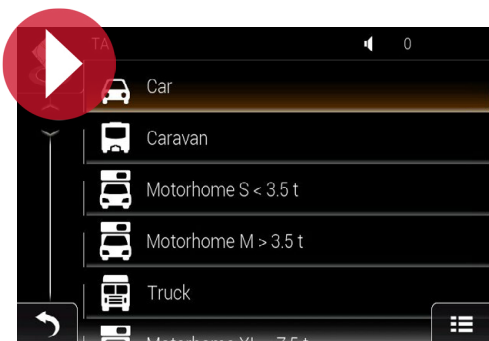

Now you can add full topographical mapping with Hema Maps giving you a powerful 2 in 1 Navigator by simply choosing the navigation you want via the Launcher Screen.

- Zenec devices are the only in-dash GPS navigation systems that can integrate Hema 4WD Maps, just like a HN7 device
- Detailed 4WD and touring maps for Australia's many iconic and lesser-known off-road journeys and destinations
- Maps at varying scales
- Over 110 base, state, regional 4x4 and national park maps
- Hema Explorer 150k Map and seamless 1:1Million Road
- Hema Maps have personally field-checked over 300,000km of outback roads and tracks to ensure their maps are accurate
- All Zenec devices with optional Hema 4WD Nav also receive Camps Australia Wide POI, integrated with over 3,900 low cost or free camp sites

ADVANCED TRUCK AND MOTORHOME NAVIGATION

Every Zenec device comes complete with our Trucks/Motorhome Navigation which adjusts your navigation routes to cater for your vehicle specifications and offers features to make your journey safer.

Vehicle Specifications

You can enter the specifications of your vehicle. Enter details like: Maximum Speed, Fuel Consumption in Cities and on Motorways, Engine Type, Length, Width, Height, Trailer and Weight. You can also enter the Freight you are carrying (e.g. Bio-hazard, Explosive, Dangerous When Wet, etc.) and even disable U-turns on all roads!

Advanced Warning System

Even while you are travelling unassisted by route guidance, the navigation will take into consideration the road ahead of you and give warnings of possible hazards. It notifies you of upcoming potential hazards such as Merging, Slippery Roads, etc. Along with standard Street Navigation warnings - you'll be notified of all the information you require for a safe journey.

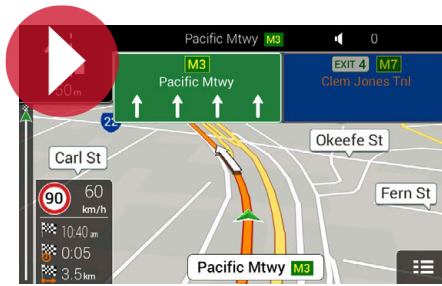

Z-N626 - The Perfect Fit

With white key illumination and a modern 6.2 inch LCD touchscreen, the Z-N626 is designed to the standard 2-DIN shape and can be integrated perfectly into almost any vehicle.

If your vehicle is fitted with Steering Wheel Controls, the Z-N626 will support the connection of interfaces (available separately) to maintain the use of these controls.

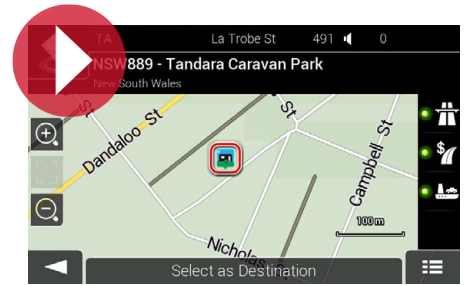

NextGen Navigation

The customised iGO primo NextGen Navigation package is the latest offering from market leader NNG. Included in the package are features like 4x4 Tracks, 3D Buildings, Text-to-Speech Voices, Safety Cameras and Enhanced Junction View which give you added confidence while being navigated.

Pre-loaded with the latest Australian & New Zealand map content as well as over 750,000 Premium POI, you'll always know where you are and where you are going. 1 year complimentary map updates are also included.

Camps 8 & Caravan Parks Australia Wide

The Hema 4WD Nav upgrade gives you so many features as you can see on page 2 of this brochure. But did you know that all Z-N626 devices with optional Hema 4WD Nav also receive Camps Australia Wide POI?

Camps Australia Wide POI is integrated with over 3,900 low cost or free camp sites. This handy addition allows you to easily find affordable campsites, caravan parks, station stays, national parks and rest areas around Australia while you are on the road.

Parrot Bluetooth

Parrot are well known as one of the leaders in Bluetooth technology. The Z-N626 comes equipped with an advanced Bluetooth module that allows the connection of 2 phones simultaneously. If either of the connected phones receives a call, you can answer it through the Zenec system.

Up to 3 phones, each with up to 1,000 contacts, can be linked making phone pairing much smoother. The Contact Search function helps you easily find a contact on any paired phone or add up to 8 Favourites to be able to quickly call those closest to you.

Radio Tuner now with DAB+

The Z-N626 now comes with the ability to receive DAB+ radio, as well as AM/FM. The 4 built in tuners both complement and support each other, allowing the Zenec to give you high quality radio reception*.

Another great feature is the dynamic background scan function on FM and DAB+. This especially comes in handy on longer drives, as the Z-N626 will constantly update the available stations list based on the stations giving the strongest and clearest reception.

*DAB+ antenna sold separately.

Gracenote Media Management

Gracenote is an awesome feature for music lovers and is well known for its "More Like This" and "Mood" based playlist creation. Gracenote automatically scans MP3 music on your USB and creates a database, which in turn allows you to select the type of music that suits your mood.

Gracenote also enables you to create smart style and genre based playlists in USB playback mode by preselecting a single song/track.

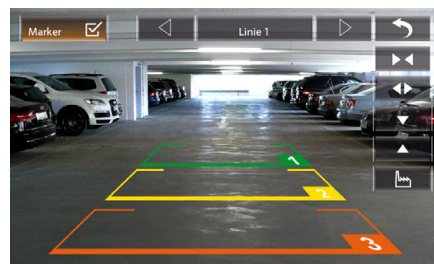

Support for 24-bit FLAC files

The Z-N626 has an integrated 24-bit D/A converter that can process digital FLAC audio data from USB media with a resolution of up to 24 bits with sampling rates of 192 kHz. Compatibility with 24-bit encoded files is a future-oriented feature that already allows you to enjoy your high resolution audio files in the highest resolution and quality, even when on the move.

The wide range of supported formats means you can play almost all the common video and audio formats with the Zenec Z-N626.

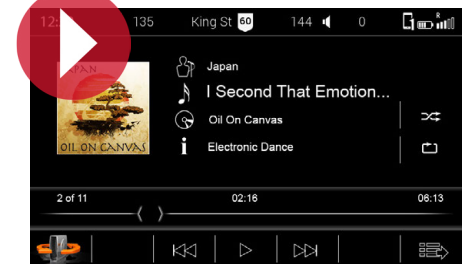

Camera Integration

For added safety, you can easily connect a reverse camera to the Z-N626 which will switch to the camera automatically when reverse gear is selected. You also have the option of displaying Static Guidance Lines and adjusting them to suit your vehicle and camera location.

The Z-N626 is also compatible with more advanced cameras, such as those with a built-in microphone. It is also possible to have more than one camera, like a caravan camera, connected to run through the Zenec device. Ask your reseller about how this can be done.

Made for iPod/iPhone

The Z-N626 is made for iPod/iPhone*. This means that you can connect your device through the USB port and you can both charge your device and play music from it.

You can use the intuitive search function to easily find an Album, Artist or Song. The Z-N626 also maintains the existing folder structure on your iPod/iPhone* so you can search through your playlists with ease. Any Apple Album Artwork will also be displayed on the device.

*Only compatible with devices using Apple Lightning connections.
